NEW PRODUCT NEWS

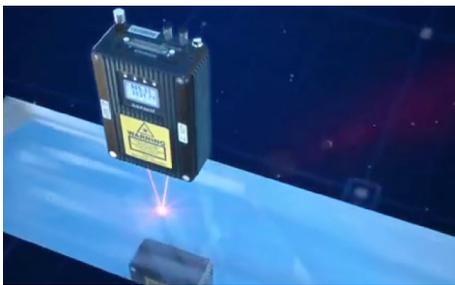

WEB SURFACE FLAW DETECTION

The Wintriss Web Ranger® **precise surface flaw detection and classification systems** include smart cameras, surface lighting, and defect detection software. Send us your sample material for comprehensive lab testing and a quotation.

NON-CONTACT LASER GAUGE

Proton's laser **web length and speed gauge** is used in roll-to-roll and cut-to-length processes. 15 times more accurate than an encoder wheel, it provides a quick ROI. Sends pulse signals in all comm formats; includes free software and phone app.

SILO LEVEL MONITORING

LV Logics makes a **self cleaning laser level sensor** and real-time monitoring equipment that is a low cost and low maintenance solution for the plastic extrusion industry. The SiloSpi includes monitoring software, a phone app and is SCADA compatible.

WEB SPREADER ROLLERS

Dienes now offers low-cost spreader rollers to **eliminate creases** all the way to the edges of your web. With wrap angles from 10° to 180°, the angle of the bristle bundles effectively smooths the film from the middle outwards.

RESTORE YOUR FIBER CORES

The CR-3 **Core Saver** by Goldenrod is pneumatically operated. Its tapered jaws are simply inserted into the crushed core and the scissor force of the jaws returns the core to its original shape.

ROLL CARTS & SHAFT PULLERS

Goldenrod makes **roll carts** to lift, move, and rotate rolls. They also make air shaft inserting/removing equipment, aka **shaft pullers**; including fixed and mobile with manual, electric push-pull, and hydraulically controlled lifting.

IN-LINE THICKNESS SENSORS

AIS produces **in-line gauging sensors** and will **upgrade your existing sensor(s) and software** with a range of technologies, both nuclear and non-nuclear, with twenty-seven sensor options: Beta, Microwave, Gamma, Shadow, Terahertz, IR Transmission, X-Ray, IR Reflectance, Gemini X-Array, Interferometer, and Laser. AIS manufactures in Indiana without proprietary parts and their software will never become obsolete.

WEB / ROLL STATIC REMOVAL

Static Clean Int'l manufactures **static elimination**, static generation, and contamination control products.

ROLL STANDS AND SLITTERS

Coast Controls fabricates affordable **custom roll stands**, whether a manual payout, fully automated with tension controls, or a slitting system. Let us quote your project.
